

SEIS 606: Data Analytics and Visualization
Fall 2026
University of St. Thomas

Homework 3: Task, Plan, and Implement!

Due: Wednesday, September 30th at 5:15 PM (before class starts)

Follow the steps we went in class to complete the following for your project:

- /speckit-plan
- /speckit-tasks
- /speckit-implement
 - Following this, you may want to explore results of a /speckit-converge call, but I am not *requiring* any iteration for this week's assignment.

You can of course rerun /speckit-constitution and/or /speckit-specify if needed.

What you'll submit

Submit a link to your GitHub repo.

I also want a short (under two pages) report, **in your own words**, about what you've learned, and any challenges in the initial spec/task/plan/implement steps. Please mention approximate time taken, especially for the implement step.

Be thinking about your next iteration(s). You may mention any thoughts in your report, but we'll discuss in class next week.
