

**SEIS 606: Data Analytics and Visualization**  
**Fall 2026**  
**University of St. Thomas**

**Homework 4:** Testing, testing...

**Due:** Wednesday, October 7<sup>th</sup> at 5:15 PM (before class starts)

Document the testing conducted in class. What issues or vulnerabilities were revealed with your app?

Attempt to fix issues through updating your spec and iterations of /speckit-implement. It's OK if you don't resolve everything; I want to hear (**in your own words**) about the process.

Submit a report with your findings. Screenshots highly encouraged. This can include screenshots of issues with your app, as well as screenshots of spec or code [diffs](#).

Don't forget to mention who you were working with in the breakout room!
