

SEIS 606: Data Analytics and Visualization
Fall 2026
University of St. Thomas

Homework 1: Getting started with GitHub & applying for Copilot for students

Due: Wednesday, September 16th at 5:15 PM (before class starts)

For this first assignment, please do the following:

1. Create an account on GitHub.com.
2. Push a list of 5-10 app ideas that you might “vibe code” to a public repository.
3. Submit a link to your repository, as well as the email address you use for your GitHub account
 - a. To make sure I can view your repository, I recommend pasting the link in a private/incognito browsing window (if you can view the link and not be logged-in, it’s a good indicator I will be able to see it)
 - b. If you already have an account using your personal email address, I *recommend*, but do not require you to add your @stthomas.edu email address as a secondary.
4. Also apply to GitHub Education as a student at this link:
<https://docs.github.com/en/copilot/how-tos/copilot-on-github/set-up-copilot/enable-copilot/set-up-for-students>
 - a. I’m hoping I may be able to expedite the process, hence asking the email address you use in step #3. But you should apply to be safe!

Let me know if you have any questions!
