UNIVERSITY OF St.Thomas

SEIS 606: Vibe Coding

Fall 2026

Paul Kaefer, Adjunct Professor

Tonight's Agenda

1. Homework review/presentations
2. Logging
3. Working session: WordDerby
4. (If time permits) working session: Food4Thought
    A. Otherwise, this fits nicely with databases & deploying topics next week

Homework discussion

What did you uncover? What did you fix?

What did you learn, about your app or about code, etc.?

Logging

Requirement: "The log must be immutable and must contain ISO 8601 timestamps."

Standards!

ISO 8601 / RFC 3339: use `2026-10-07T14:03:22.512Z`. Store in UTC, include milliseconds, and never use local time without an offset.

Immutable means append-only: no edits or deletes.

Logging, continued

- **Structured logs (JSON)** with a level, event name, and context. Agents and tools can parse these.
- **What *not* to log:** passwords, tokens, sensitive information (PII, PHI, etc.).
- **How logging ties back to debugging:** logs are something you feed the agent instead of just stating, "it's broken."
- **Discussion question:** why might immutability matter for Food4Thought specifically (audit, trust, grading)?

More on "immutability"

- Create a file/log service that only allows appends (could be an external location/tool, where the app doesn't necessarily control it)
- Only allow the app to INSERT into database (permissions for its role)
- Can explore something like generating hashes as a check against tampering

Logging in WordDerby

- Let's log game events:
  - Game start time
  - Word submitted
  - Score

- What else?
  - Game end time?
  - Number of guesses (correct/incorrect)?

Let's iterate on WordDerby

- Our task list:
  - Logging (see previous slide)
  - Aesthetic changes (page margin, animated figure enhancements?)
  - Word list improvements:
    - Longer
    - More categories
    - Way to select categories (as well as options for random/all)

Further work

- Have CoPilot research tools/libraries for gaming animations (Chris suggested)
  - Based on its suggestions, improve our animations
- Add JSON render to allow for more themes
- More on the “roller rink” theme: background, actual clock
- Research React Motion v12, per John
- Win/lose enhancements:
  - Win: images/pictures of the terms
  - Lose: silly animation for the character?
- Title page? Vs. fun to jump right in to the game
- Remove “solve it for me” button? → consider daily puzzle, etc.
- Everything around scoring/tracking
- Logging: currently just in-browser

Time permitting: Food4Thought development

- Postgres setup
  - Docker is one option. Reproducible, but requires (and relies on) a local install.
  - Postgres.app/Homebrew: works on Macs specifically
  - Neon, Supabase: hosted options
    - Ultimately we'd want to explore this, but I'd like us to develop a plan for what a hosted app would look like.

UNIVERSITY OF St.Thomas

No homework* this week!
Focus on your project.

(*but I do recommend you incorporate logging into your project!)
